REPORT

The Value Added Course on Web Designing was organized with the objective of equipping students with foundational and practical knowledge of website development. The course was conducted over a structured duration, combining both theoretical sessions and hands-on practice to ensure effective learning.

During the course, students were introduced to the basics of web technologies, including the structure and working of websites. They were trained in **HTML** for creating web page layouts, **CSS** for styling and design, and basic **JavaScript** for adding interactivity and **PhotoShop**. Emphasis was given to modern design principles such as responsive web design, enabling students to create websites compatible with mobile, tablet, and desktop devices.

Practical sessions formed a core component of the program, where students actively developed web pages using code editors and browser tools. They were guided to design user-friendly interfaces, apply color schemes, typography, and layout techniques effectively. Additionally, students were introduced to debugging methods and best practices in web development.

Overall, the course was highly beneficial in improving students' technical skills, creativity, and understanding of web development concepts. It also provided a strong foundation for pursuing further learning and career opportunities in web designing and front-end development.
